

Notice of Construction

Town of Plympton – Wyoming: CCTV Inspections & Sewer Flushing

Please note that GFL Environmental Inc. from *Port Perry, Ontario* will be undertaking flushing, closed-circuit television (CCTV) and rehabilitation repairs in the sanitary network on behalf of the Town of Plympton-Wyoming. Please review the flip side containing overview map with areas of work.

This work involves maintenance by using high pressure flushing and routine assessment using CCTV inspections trucks on the sanitary sewer network.

During sewer flushing operations there can be air pressure that may travel up the sanitary service lateral to the house/building. A well installed ventilation system is designed to dissipate this pressure. The work should not impact you or cause any disruption to service but there is a small chance that noise and odours may occur. As a precaution we advise the following while work is being completed:

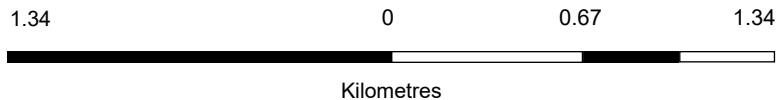

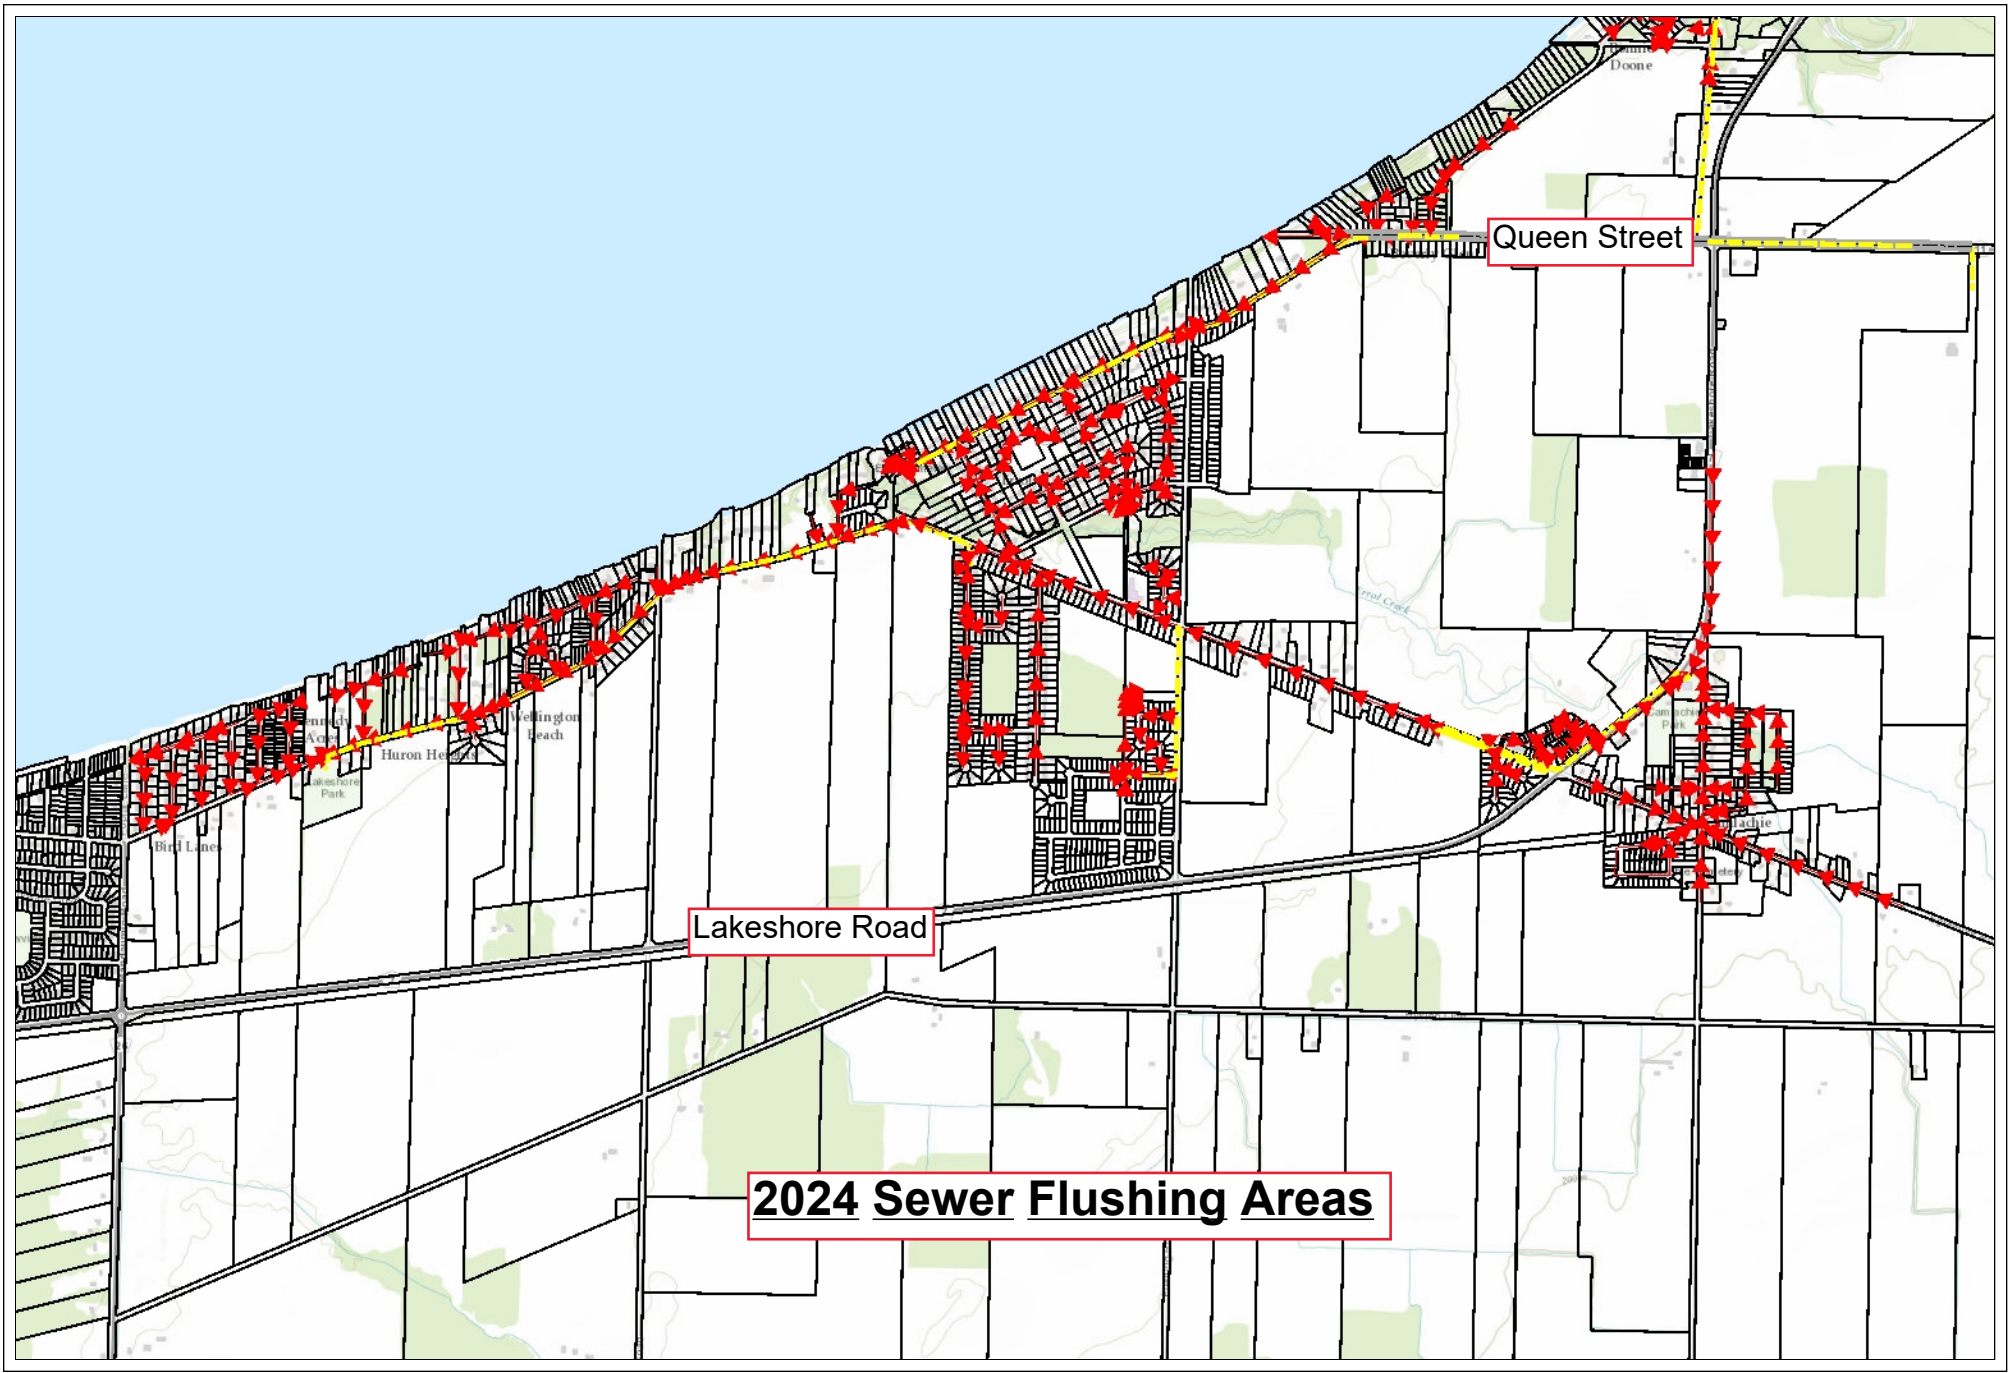

- Close toilets lids during the times when they are not being used.
- Flush toilets after every use.
- To prevent odours, pour 2 liters of water into infrequently used plumbing fixtures (sinks, drains, etc) to ensure the trap is full

There is no action required on your part and this notice is to advise of the upcoming work between July 29nd, 2024, and September 27th, 2024.

Every attempt will be made to minimize impact on the local community through the course of this project. Should you have any questions or concerns during the work, the following contacts are provided for your convenience.
